Fpdf Advanced Multicell

Description:

This **FPDF addon** allows creation of an **Advanced Multicell** which uses as input a **TAG based formatted string** instead of a simple string. The use of tags allows to change the font, the style (**bold**, *italic*, underline, ~~strikethrough~~), the size, and the color of characters and many other features.

The call of the function is pretty similar to the Multicell function in the FPDF base class
